#### \* New Requirements from the Swedish Environmental Protection Agency (Naturvårdsverket)

Starting from January 1, 2024, the Swedish Environmental Protection Agency has introduced requirements for producer responsibility fees for electronics to be differentiated based on the chemical content of the products, and higher prices must be applied to certain products.

This means that the price list is differentiated in the following ways:

- Electronic products where any component contains 0.1 weight percent or more of substances from the candidate list in the "REACH regulation" will have the regular price.
- A discount of 10 percent is issued for products for which you already pay full chemical tax, provided that the product does not contain any other substances from the candidate list.
- If you already pay the full chemical tax for the product and it also contains any other substance from the candidate list not covered by the chemical tax, the product will continue to have the regular price.
- Products that only contain components with less than 0.1 weight percent of substances on the candidate list will also qualify for 10 percent discount.

#### What Does This Mean for Me as a Customer?

The change will make it possible for you to indicate in each report how many of the products you have placed on the market that qualify for the discounted price and how many products warrant the regular price. Please note that you may also need to provide supporting documents that your products do not contain any substances from the candidate list if you report products with the discounted price.

#### What Does the Candidate List and REACH Regulation Mean?

**The REACH Regulation** (Registration, Evaluation, Authorization, and Restriction of Chemicals) is a European legislation that regulates the registration, evaluation, authorization, and restriction of chemicals to ensure their safety for people and the environment.

**The candidate list** is a list of substances assessed to be particularly hazardous to human health and the environment within the framework of the REACH Regulation and may be subject to restrictions or authorization requirements.

You can find the Candidate List on this website:  
<https://www.echa.europa.eu/web/guest/candidate-list-table>

We understand that this is complex, so we have gathered more information about this change and what it means on our website at
